**In this first newsletter of 2018 a short report of winter training in Spain with some nice pictures. And some news about the new racing season.**

# CARTAGENA

Last week Jeroen and his mechanic Bram traveled together to the circuit of Cartagena in beautiful Spain. Since it is still cold in the Netherlands, we have opted for a winter training of the Dutch organization Trackdays4all. A week earlier, the scooter and other things that come to Spain already delivered to our sponsor Santi.nl, they arrange transport of motor and accessories for motor (sport) trips. Their slogan is ' You fly They drive " .

Upon arrival at the circuit everything was ready and there was already a shared pit box arranged for Jeroen. When Jeroen left the pits the first time, he got a lot of attention. A scooter is still on the road at home and not on the circuit between the motorbikes? Soon everybody knew that this was possible! On the straight he was overtaken by the fast 600 / 1000cc motorbikes but in the corners he was faster than most on the track.

On the first day Jeroen improved his personal record on this track by half a second. Last year the fastest lap time was a 2: 06.8 and now a 2: 06.3. As a result, the objective was changed immediately to have a low 2:05 or a high 2:04 this weekend. From people on the circuit we were told that riders of the Spanish championship scooter racing here a time of 2:00 driving around. It must be said that this is a slipstream and with riders who drive the same lines.

On day 2 Jeroen started with a good first practice and scored a 2: 05.2, again a second faster. Unfortunately there were some motor problems in the afternoon so we could not drive anymore. Fortunately, this was still possible to solve and could the third day just be driven.

Bram did a great job together with Jeroen because the problems were solved and on the third day Jeroen drove a lap time of 2: 03.4 which was an improvement of 3 seconds

compared to last year! Hereafter unfortunately all sets of tires were worn out, so there was no further improvement in time anymore unfortunately.

We have tried some things in terms of settings of the scooter and in the evening all the stuff was loaded into the truck again.

"Jeroen's reaction:  
 I am very pleased with the progress that has been made in view of last year! I did not expect this at all, the motor part is the same as last year, so I know that I have improved myself. It must be said that on the new Liqui Moly oil the scooter did a great job! It was a very successful test and I look confidently forward to the first race of the new season."  
 "

As soon as the scooter is back home we will check everything again and prepare for the next training. We want to try to train a few more times before the season starts to be ready for it! Jeroen's competitors are already busy in training so we can not stay behind of course!

## SEASON 2018

The first official test of the Malossi Cup is scheduled on March 11 at the circuit of Modena. Here Jeroen will also have to take the stage for the achieved result of last race year. We will start again this season in the North Malossi Cup. We also want to try as a guest rider to ride some races in other international championships.

## CALENDER SEIZOEN 2018

11-03-2018	Meeting&Test	Modena
07/08-04-2018	Race 1	Varano
09/10-06-2018	Race 2	Nuvolari
14/15-07-2018	Race 3	Modena
15/16-09-2018	Race 4	Magione
12/14-10-2018	World Malossi Day Cup	Vallelunga

## NEW SPONSORS

Of course, racing is not possible without sponsors. That is why we are happy with our loyal sponsors and are happy to announce that we have also found some new sponsors for next season. We will briefly introduce these to you below:

Where other major motorsport teams already went before us, we are happy to announce that we will be supported by Thermal Technology next season.

**Thermal Technology** company is founded in 2001, when it started the utilisation of the carbon as a resistive element. After performing numerous tests and scientific

studies, Thermal Technology decides to test the carbon as a heating element. Later it started to produce for test the so called "heating cover for tire" for the motorcycle racing.

In the end of the year 2003, the specialists from Thermal Technology company careful studied the results and the quality of the work done with the heating tires, and decided to make a production line with heating covers for motorcycle racing tires, and the heating covers for industrial use. From that moment on the company became a real partner for the teams participating at the races. In 2004 Thermal Technology became legal partner of a successful team, part of the international Formula 1 racing. By the way of making the heating surface, the company tested the functionality, thermal potential and electrical consumption of the indoor and outdoor heating systems (multilayer and mesh).

After that, Thermal Technology focused its attention on temperature electrical control, integration of the heating system in the wall and gypsum panel, and making of the electrical radiators with the carbon heater and low consumption. During 2006, the company presented its products on the Italian market, where they have been carefully studied and appreciated due to the low consumption, ecological type, and simple installation. In short time all the European countries were also interested of the company's products. Nowadays, Thermal Technology company is leader in innovation and progress heating system.

**ROKAFAST**  
*More than Fasteners*

**ROKAFAST Apeldoorn B.V.** is the fastening specialist from Central Netherlands. They think in terms of technology and provide tailor-made advice. With more than 10 years of experience, ROKAFAST

employees are the ideal discussion partner for purchasing, business office and technicians. They deliver to the professional end-user in various industries.

Of course we are always looking for new sponsors! If you are interested, do not hesitate and ask for our sponsor cap without any obligations.

Of course, sponsoring does not always have to be in the form of financial support. Are you skilled in a specific field that can help our team? Do you have material at your disposal that we can use, maybe you can give a certain discount on products or do you have another idea that might help us further? Discuss it with us and together we realize it! You can contact us via [t-1racing@live.nl](mailto:t-1racing@live.nl).

In February there will probably not be a newsletter but if there are news we will keep you informed of course!
